

Project Design Phase-I

Solution Architecture

Date	05 November 2022
Team ID	PNT2022TMID42599
Project Name	Real time water quality monitoring and control system
Maximum Marks	4 Marks

Sensors:

- Getting information about the quality of the water.
- Various sensors are used to get the information.
- Then gathered information is sent to the IOT platform.

Create and Configure IBM cloud platform services:

- Create IBM Watson IOT platform
- Create a device & configure the IBM IOT Platform
- Create Node-Red service
- Create a database in IBM Cloudant DB to save the sensor's readings.

Develop a web application using Node-RED service:

- Develop a web application using Node-RED.
- Develop a python script to publish the readings of the sensors and threshold readings of the quality of water to remind details to the IBM IOT Platform.

Develop an application:

- Develop an application in which the user can view the readings of the sensors
- Develop an application which can alert the user by sending alert messages.
